### Top 10s

there are top rankings (with the first 10 visible) on the following categories:

**Medal Score (Alltime):** total score, gold=15pnt, silver=3pnt, bronze=1pnt

**Medal Score (avg ):** avg score per week, gold=15pnt, silver=3pnt, bronze=1pnt

**Most earned NMR:** Alltime, average per week

**Most earned NMR vs Stake %:** payout divided by selected stake (>30 weeks active)

#### Correlation Medal Score: Alltime

## Model Selection

username

numerark

master\_key

integration\_test\_7

integration\_test

apprentice\_key

Some pages contain visuals with statistics for pre-selected models. You can select these models with the use of the **'Filters'** found on the right side of the screen. Select the ***username*** filter on **'Filters on all pages'** and select the models that you want to see. The left side of this screen shows the list of models that is going to be used.

For the other statistics, those apply to all models (example leaderboard with all the models) and will not be affected by this filter.

Leaderboard statistics - filtered on your Models

these are the statistics also found in the numerai website, based on V2leaderboard API, this also contains the payouts and previous rankings

## The Rise and Fall - all Models

these are the ranking differences for correlation, MMC and 24Wk Return in the last week and month. Sorting on the increase will give the top rise or fall. In this case a positive increase means better ranking, negative worse ranking

### Correlation rank change 1 Month

the models who when up the most on the correlation ranking in the last month. This is presorted on increase of correlation ranking, you can also change sorting to see decrease (negative). The models with increase ~0 should be the most 'stable' models

username	Corr ranking increase
leibniz	3659
jay1100_bass	3592

### Top 13wk return Models last week

the models who went up the most on the 24wk return ranking in the last week. This is presorted on increase of 24wk return ranking, you can also change sorting to see decrease (negative). The models with increase ~0 should be the most 'stable' models

username	13wk return increase

Relative Payout Performance - Filtered on your Models

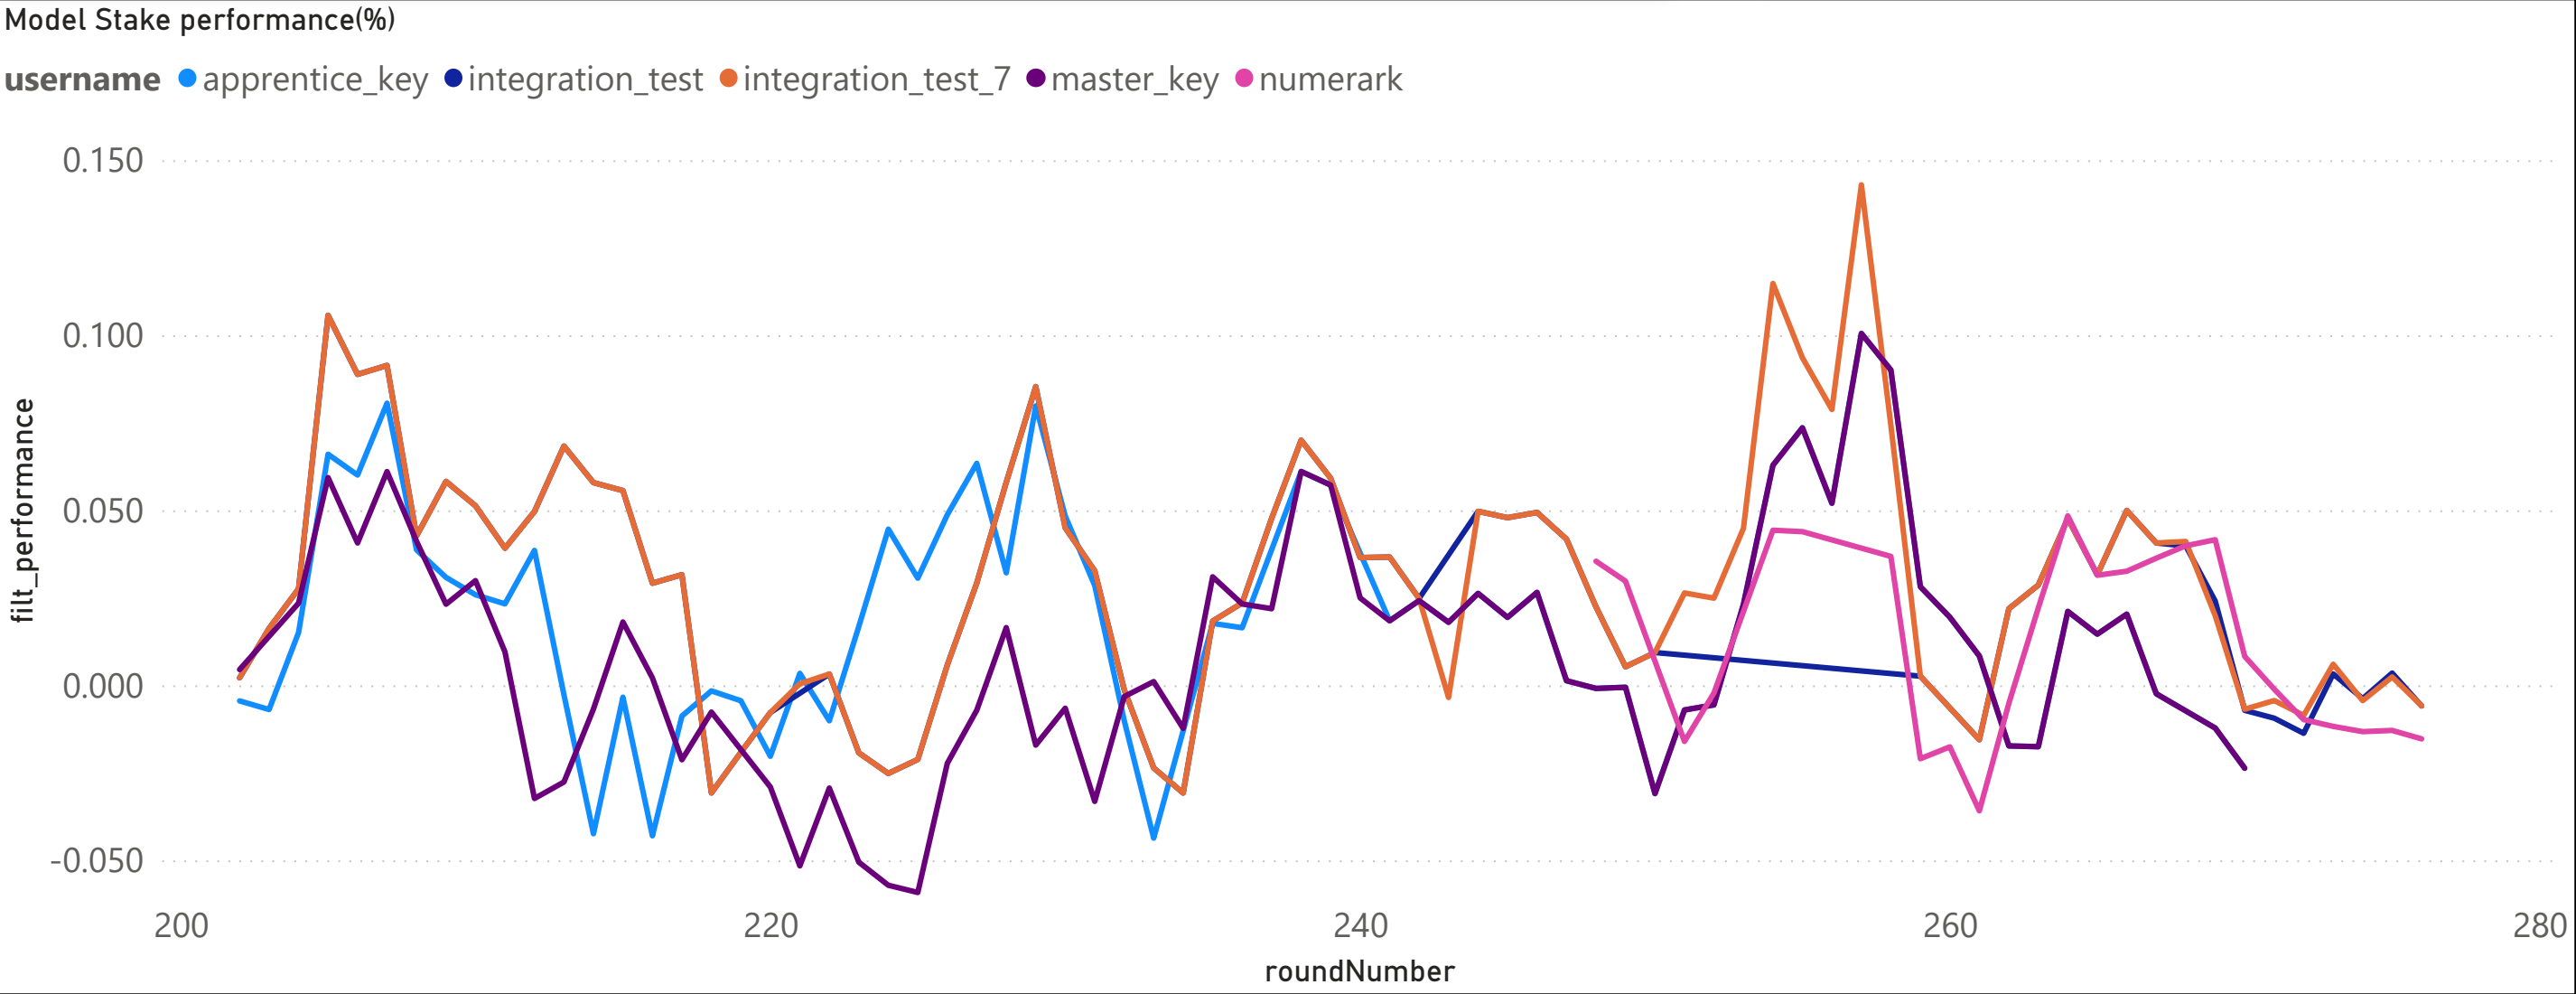

these are the relative payout performances for your models per round. The figure and table indicate the relative payout per model per round in NMR as reported through the API. In this case relative payout is calculated as the payout divided by the selected stake value (which gives % of stake)
